Karachi, Pakistan | fawad.work | +923110253094 | [linkedin.com/in/fawadimran](https://www.linkedin.com/in/fawadimran)

SUMMARY

Fullstack Developer with one year of experience in building and shipping production-ready websites, mobile apps, and desktop apps, leveraging AI tools (Claude, Cursor) to accelerate development, generate boilerplate code, and debug complex logic. Specializing in React.js, Next.js, Nodejs, React Native, Typescript, and cloud deployments.

PROFESSIONAL EXPERIENCE

Contract Services

Contract, Remote, Karachi

Fullstack Developer

Mar 2025 - Mar 2026

*Delivered 20+ client projects end-to-end as a contracted developer, working across the full stack to build and ship production-ready web, mobile, desktop applications and automation workflows. Maintained a **4-5 star client rating** across all delivered projects.*

- Built and delivered 20+ client projects spanning web, mobile, and desktop applications with consistently high satisfaction ratings
- Engineered 12+ full-stack web applications using React.js and Next.js with Expressjs and Supabase as backend solutions
- Integrated AI (Gemini, OpenAI) into automation workflows using n8n, Make, Keragon, and VAPI to streamline clients business processes
- Utilized AI tools like Claude Code and Cursor as a force multiplier, accelerating productivity and delivery across 20+ projects
- Deployed and managed 8+ applications on VPS and Vercel, handling end-to-end delivery from development to production
- Collaborated directly with clients to understand requirements and deliver solutions on time with minimal revisions

PROJECTS

Text-to-Speech Voiceover Platform (Saas)

June 2025

Project Links: [Source Code](#)

- Built a full-stack TTS platform capable of generating voiceover clips exceeding 30 minutes, far beyond the 10-minute limit of Google AI Studio.
- **Project Objective:** To overcome Gemini TTS API limitations and allow users to generate long-form voiceovers in a single request.

- **Skills Developed:** Designed a chunking strategy splitting scripts into ~6000 character segments processed in parallel via Promise.all, and combined PCM audio data into a single MP3 using FFmpeg.
- **Key Features:** Long-form TTS generation, real-time status updates via Supabase Realtime, voice history, admin panel with error logs and usage tracking.
- **Skill Utilization:** Next.js, Gemini TTS API, Trigger.dev, Upstash Queue, Supabase, FFmpeg
- **Challenges Overcome:** Bypassed Gemini TTS 10-minute limit by chunking text and parallelizing API calls, then stitching audio chunks into a single MP3.
- **Outcome:** Successfully delivered a production-ready voiceover platform handling scripts of 30+ minutes with a smooth user experience.

Referral Engine

Jan 2026 - Feb 2026

Project Links: [Source Code](#) [View Project](#)

- Built a complete referral engine from scratch and redesigned the payment flow from a static pricing table to a fully custom solution with Stripe Connect OAuth integration.
- **Project Objective:** To enable companies to automate client referrals and motivate them with stripe payouts, turning satisfied clients into active referrers.
- **Key Features:** Company onboarding with Stripe Connect, referral page wizard, consent request via link or email, client management dashboard, review request system, 5-star triggered referrer onboarding, automated stripe payouts to referrers.
- **Skill Utilization:** React.js, Python, Stripe Connect OAuth, Vercel, Render
- **Challenges Overcome:** Implemented Stripe Connect OAuth flow to securely link both company and referrer stripe accounts and automated cross-account payouts.
- **Outcome:** Delivered a fully functional referral engine.

Research Directory Platform (Saas)

Nov 2025 - Dec 2025

Project Links: [Source Code](#)

- Built a full-stack web application for researchers to manage their academic directory including papers, collaborators, reviewers, and journals with email-based invitation and notification systems.
- **Project Objective:** To provide researchers with a centralized platform to manage their publications, collaborate with peers, and share their work through a structured directory.
- **Key Features:** Paper and collaborator management, email-based researcher invitations, collaborator notification emails, publication stats export in TXT and DOCX format, admin panel with email-based and domain-based coupon management and user management.
- **Skill Utilization:** React.js, Node.js, Express.js
- **Challenges Overcome:** Built a flexible permissions system to handle different researcher roles and implemented a DOCX export that correctly formats publication stats per ranking.
- **Outcome:** Delivered a fully functional research directory platform with complete admin controls and collaboration features.

Desktop Transcription App (Whisper Flow Clone)

Dec 2025

Project Links: [Source Code](#)

- Built an Electron-based desktop SaaS application that transcribes speech to text and pastes it directly on the user's screen using keyboard shortcuts.
- **Project Objective:** To build a desktop productivity tool that allows users to dictate text anywhere on their computer without switching apps.
- **Key Features:** Microphone permission handling, global keyboard shortcut triggers, real-time audio transcription via Gemini, clipboard-based text pasting.
- **Skill Utilization:** Electron.js, Gemini Transcription API, Clipboard API
- **Outcome:** Delivered a fully functional desktop transcription SaaS mirroring the core functionality of Whisper Flow AI.

TECHNICAL SKILLS

React.js, Next.js, Typescript, Supabase, React Native, AI Tools (Cursor, Claude), Vite, Electron, Node.js, Express, MongoDB, RESTful APIs, Git, Linux, Shadcn, Tailwindcss, Performance Optimizations

EDUCATION

Iqra University, *Bachelors in Computer Science*

2023 - 2027
